Project Report BTech CSE/IT/AIML

on

Repair Service Management System

by

Chaitanya Surendra Surwase (32558013382)

CERTIFICATE

This is to certify that the BTech CSE Project report " **Repair Service Management System"** Submitted by **Chaitanya Surendra Surwase** Is bonafide work carried out by his under the supervision of **MS. Sonali Chothave** and it is submitted towards the partial fulfillment of the requirement of JSPM University Pune for the award of the degree of BTech CSE

Internal Examiner

Acknowledgement

I would like to express my sincere gratitude to my project guide for their valuable guidance and support throughout the development of this project. I am also thankful to my teachers for providing the necessary knowledge and resources. I extend my thanks to my friends for their helpful suggestions and encouragement. I am grateful to my institution for giving me this opportunity to work on such a practical project. Finally, I would like to thank my family for their continuous support and motivation

Abstract

The Repair Service Management System is a web-based application designed to manage and monitor repair services efficiently. It allows users to add, update, and track repair requests for various electronic devices. The system helps in maintaining organized records of customers, devices, and repair status. It provides a simple and user-friendly interface for easy operation. The application reduces manual work and improves accuracy in managing repair data. It also helps service centers to track pending and completed repairs effectively. The system is developed using basic web technologies like HTML, CSS, and JavaScript. Overall, this project enhances efficiency and provides a structured approach to repair service management.

Introduction

About the Project :-

The Repair Service Management System is a web-based application developed to manage repair requests efficiently. It allows users to record customer details, device information, and repair status. The system helps in organizing and tracking all repair activities in one place. It reduces manual work and improves accuracy. This project provides a simple and effective solution for small repair service businesses.

Purpose of Website :-

The main purpose is to:

- Store repair details
- Track repair status
- Improve service efficiency

Scope of the Project :-

The scope of this project includes managing repair requests for electronic devices such as mobiles, laptops, and computers. It is suitable for small repair shops and service centers to maintain records efficiently. The system allows tracking of repair status and customer details in a simple way. It can be further expanded by adding features like login system, database storage, and online service booking.

Objectives

The main objectives of this project are:

- Provide a user-friendly interface
- Ensure fast performance
- Maintain accurate records
- Improve service tracking
- Reduce manual paperwork
- Create a simple and efficient system

System Requirements

Hardware Requirements

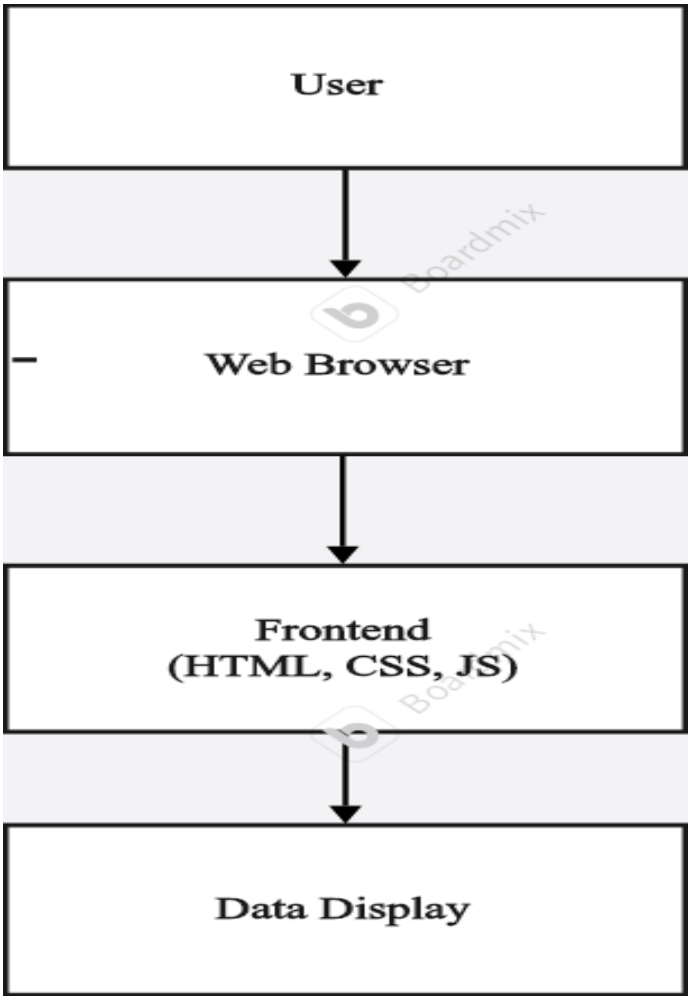
- Computer/Laptop
- Minimum 4GB RAM
- Internet connection

Software Requirements

- Web Browser (Chrome, Edge)
- HTML, CSS, JavaScript
- Code Editor (VS Code / Notepad)

System Design :-

Architecture Diagram (Concept)



Explanation

- User interacts with UI
- Data is processed using JavaScript
- Output is displayed in table format

Methodology

The project follows a simple development approach:

1. Requirement Analysis
2. Design UI Layout
3. Develop using HTML, CSS, JavaScript
4. Test functionality
5. Improve design and features

Implementation

Modules of the System

1. Home Page

- Displays system title and overview

2. Dashboard

- Shows total repairs
- Shows pending and completed repairs

3. Add Repair Module

- Input customer name
- Enter device details
- Select repair status

4. Repair Records Table

- Displays all repair entries
- Shows status (Pending / Completed)

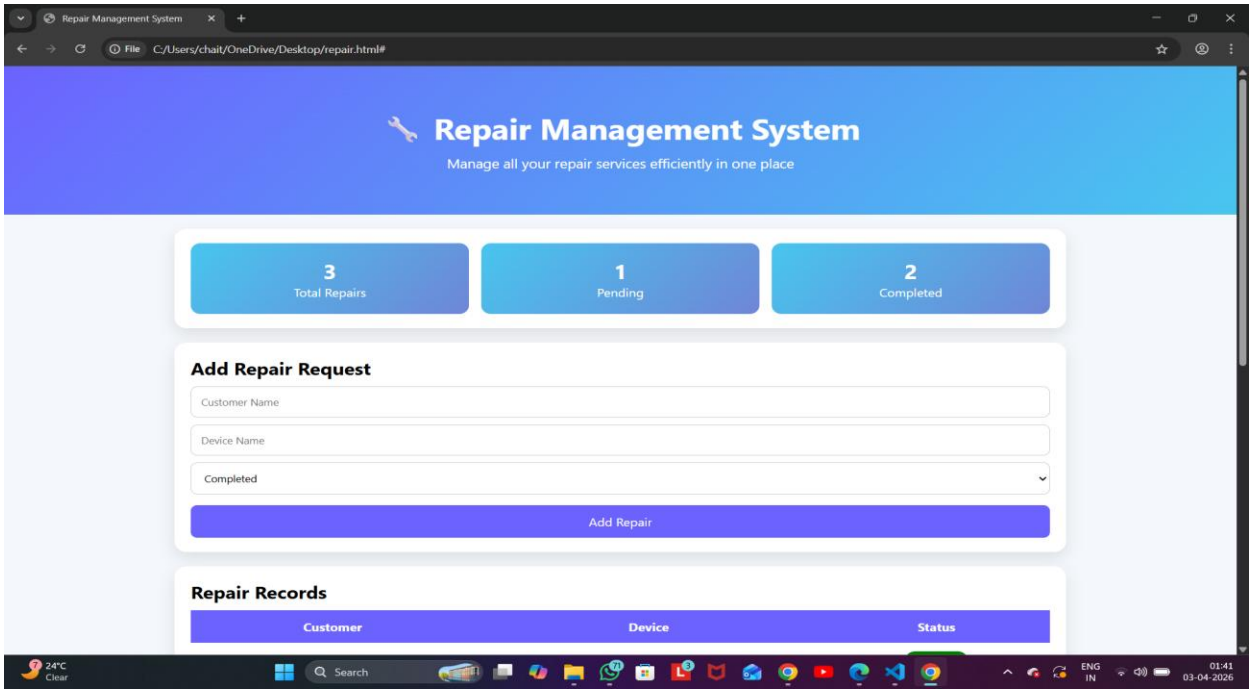
5. Services Section

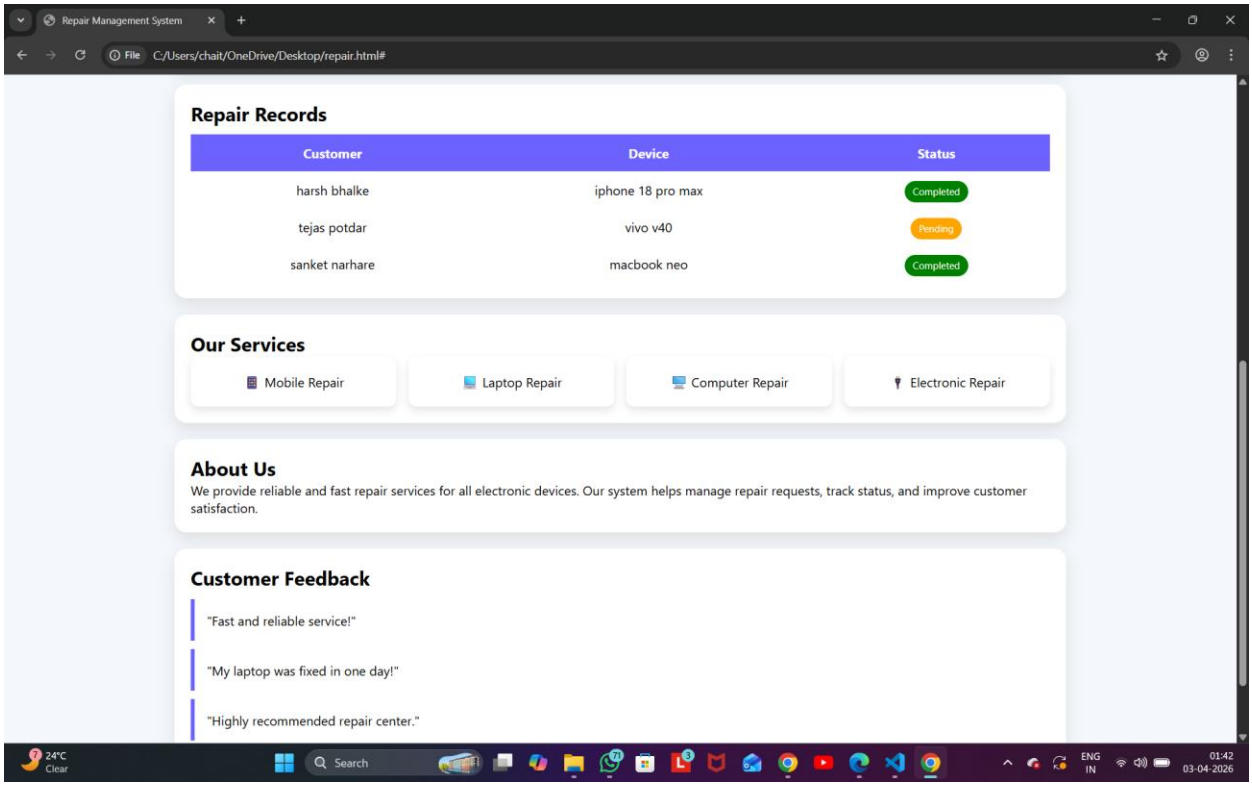
- Shows types of repair services

6. Footer Section

- Contact details
- Working hours
- Social links

Screenshots :-





Results :-

- Successfully created a working web-based system
- Users can add and track repairs easily
- System is responsive and user-friendly
- Data is displayed clearly

Conclusion:-

The Repair Service Management System simplifies the process of managing repair services. It reduces manual work, improves efficiency, and provides a clear overview of repair activities. This project demonstrates how web technologies can be used to solve real-world problems effectively.
